

Lawn Fertilizer & Weed Control

SPRING LAWN FERTILIZER:

Wright's Feeds 'N Needs offers a Landscaper's Blend Lawn Fertilizer in a formulation of "28 – 4 – 8" with 40% SCU. This product is specially-formulated to provide the perfect ratios of Nitrogen, Phosphorus and Potassium to feed your lawn after a long winter resulting in a quick green-up in spring. Just under half of the nitrogen in this fertilizer is sulphur-coated to give an additional nitrogen feeding-boost in roughly a month after your initial application of our most popular fertilizer. This will carry your lawn through the summer months when it is too hot to apply. Another application of a fall blend fertilizer can be applied late summer or early fall to encourage good root development that will help your lawn withstand the winter ahead.

One bag of 28 – 4 – 8 (25 kg.) covers approx. 10,000 sq. ft. (~1/4 acre). Volume discounts are available for large orders and landscapers.

WEED CONTROL: A healthy, thick green lawn is your best defense against weeds — Weeds don't like competition and have trouble getting established if they are struggling in your healthy lawn for sunshine and water.

Since the Pesticide Ban was enacted in Ontario in 2009, chemical weed control is no longer permitted for killing weeds in lawns, gardens, pathways or parks.

There are a number of products available (corn gluten meal, vinegar-based products, etc.) that will help you keep the weeds down in your lawn, flower beds, patios and walkways. Feel free to ask us for more information.
