

NATURE'S CHOICE

Wildlife Mixture

Nature's Choice is a wildlife mixture for establishing feeding areas for deer, turkeys and other wildlife. It is a blend of widely adaptable and hardy perennial and annual seeds that will grow in a wide range of soils and weather conditions. It can be planted in spring or late summer and will attract many wildlife species in the area by providing feed, as well as a habitat and cover for wildlife.

COMPOSITION

Alsike clover
Forage kale
Forage rape
Japanese millet
Orchardgrass
Perennial Ryegrass
Red clover
Sorghum-sudangrass
Stubble Turnip
Timothy
Trefoil
White clover

Seeding Rate: 10 kg/acre at a depth of 1-2cm.

Suggested Seeding Methods

Prepare the seedbed, it should be firm but not compacted leaving the ground bare and free of weeds. Seed can be drilled or broadcasted. It is recommended to use a roller, harrow or rake the seedbed after planting to move the seed into a good soil-seed contact. Fertilize according to soil test results wherever possible.
